Prineville, Oregon 97754

Re: Comments regarding the Upper Deschutes Resource Management Plan

Dear Robert:

Please record these comments for the record in your review of the proposed Upper Deschutes RMP.

We appreciated BLM's recent willingness to reconsider the siting requirements for our dry utility right of way. That process illuminated the tremendous opportunities we have to enhance and restore the natural values of the public lands surrounding the resort, as well as the broader landscape of public lands between Highway 97 and Highway 20. We at Pronghorn are committed to an active partnership with BLM toward the accomplishment of public land enhancement efforts throughout this broad area.

Please consider our specific comments, which relate to the area referred to in the plan as the "Bend Redmond" area between Bend, Redmond, Powell Butte Highway, and Highway 97.

We understand that this plan is intended to set the broadest possible direction for transportation planning affecting the Bend Redmond area. The residents and owners of Pronghorn should be considered major stakeholders in any discussion about highway rights of way, and we have been encouraged by our discussions with BLM to date regarding future scenarios for the placement of our permanent secondary access to the resort, as required by Deschutes County.

We have monitored the collaborative effort of the Regional Solutions Team to address transportation needs in the Bend-Redmond area. Now that this has become a Regional Problem

Mr. Robert Towne
January 15, 2004
Page 2

Solving effort, we ask that Pronghorn be designated a direct participant alongside the government agencies.

In addition, we acknowledge the innovative effort by BLM and others to develop a process for identifying those grazing allotments in which BLM would allow their retirement from grazing during the life of the RMP, upon voluntary relinquishment of the grazing permit. However, we disagree with BLM's proposal that the Crenshaw Allotment (#5116) be designated for reserve forage in the event that we choose to relinquish the permit. We ask that this allotment be closed in the event we choose to relinquish the permit. We suggest that given this allotments' proximity to a major resort, its potential for ecological restoration, and as important antelope habitat, it should be considered to have, in the context of your proposed matrix, at least moderate ecological potential and high social potential, and therefore be eligible for closure.

In order to effectively enhance the land surrounding Pronghorn we intend to collaboratively work with BLM to remove old fences and to close and revegetate unnecessary or duplicative roads. We support those aspects of the plan that are consistent with the enhancement of the public lands surrounding Pronghorn. Given our general concern about the existing density of the network of roads and trails in the area near Pronghorn, we ask for continued collaboration regarding the development of any new trails in the area, and we support placement of a well thought out trail system between Bend and Redmond.

Very truly yours,

Scott Denney

RE: Upper Deschutes Resource Management Draft

As a concerned citizen and recreationist I would like to be on record as supportive of motorized recreation on BLM lands in Central Oregon.

The preferred alternative BLM is proposing does not adequately reflect how an interim policy will be implemented. This interim policy greatly affects our sport and the users as there are no assurances BLM will ever have the resources to put together a designated trail system in the areas proposed.

The aggressive vegetation management in Alt. 7 of the Juniper woodlands will negatively impact a proposed trail system.

We do not support the closure of the Badlands and feel that providing no motorized opportunities at Prineville Reservoir and the Lapine area is a mistake. There is use occurring in those areas currently, where will that use go? Especially for the Lapine and Prineville residents.

Our use is increasing approximately 20% annually with sales of OHV equipment listed at \$18 billion annually – the increasing use is not reflected in the severe limitations to OHV use on BLM land.

Please adopt a more flexible road trail density to allow for the best use of the land and for a designated trail system that will succeed. By micromanaging your areas and attempting to put trails out for several different uses in the same areas we feel the management will fail and ultimately our use will suffer further restrictions.

RE: Upper Deschutes Resource Management Draft

As a concerned citizen and recreationist I would like to be on record as supportive of motorized recreation on BLM lands in Central Oregon.

The preferred alternative BLM is proposing does not adequately reflect how an interim policy will be implemented. This interim policy greatly affects our sport and the users as there are no assurances BLM will ever have the resources to put together a designated trail system in the areas proposed.

The aggressive vegetation management in Alt. 7 of the Juniper woodlands will negatively impact a proposed trail system.

We do not support the closure of the Badlands and feel that providing no motorized opportunities at Prineville Reservoir and the Lapine area is a mistake. There is use occurring in those areas currently, where will that use go? Especially for the Lapine and Prineville residents.

Our use is increasing approximately 20% annually with sales of OHV equipment listed at \$18 billion annually – the increasing use is not reflected in the severe limitations to OHV use on BLM land.

Please adopt a more flexible road trail density to allow for the best use of the land and for a designated trail system that will succeed. By micromanaging your areas and attempting to put trails out for several different uses in the same areas we feel the management will fail and ultimately our use will suffer further restrictions.

RE: Upper Deschutes Resource Management Draft

As a concerned citizen and recreationist I would like to be on record as supportive of motorized recreation on BLM lands in Central Oregon.

The preferred alternative BLM is proposing does not adequately reflect how an interim policy will be implemented. This interim policy greatly affects our sport and the users as there are no assurances BLM will ever have the resources to put together a designated trail system in the areas proposed.

The aggressive vegetation management in Alt. 7 of the Juniper woodlands will negatively impact a proposed trail system.

We do not support the closure of the Badlands and feel that providing no motorized opportunities at Prineville Reservoir and the Lapine area is a mistake. There is use occurring in those areas currently, where will that use go? Especially for the Lapine and Prineville residents.

Our use is increasing approximately 20% annually with sales of OHV equipment listed at \$18 billion annually – the increasing use is not reflected in the severe limitations to OHV use on BLM land.

Please adopt a more flexible road trail density to allow for the best use of the land and for a designated trail system that will succeed. By micromanaging your areas and attempting to put trails out for several different uses in the same areas we feel the management will fail and ultimately our use will suffer further restrictions.
